

**Dr. Rémi Béranger, Rennes University, France**

Dr. Rémi Béranger is associate professor in midwifery at the University of Rennes (Brittany, France), and environmental epidemiologist at the *Institut de Recherche en Santé, Environnement et Travail* (Inserm UMR 1085). His researches are dedicated to the DOHaD hypotheses, mainly on the effect of prenatal pesticides and solvents exposures on the pregnancy outcomes and child development. Dr. Béranger take part in several expert panels for French public agencies and learned societies, and contribute in guidelines production to disseminate health-environment knowledge among healthcare professionals.
